

The Win Pro 400 Awning

The Llaza Win Pro 400 offers the latest in design and technology. Its clean and compact look accentuates the **modern** character of the system, making it a perfect match for the most cutting-edge architectural designs.

The Win Pro 400 model combines the **strength** and **practicality** of Monobloc with the advanced design and technology of WIN: a perfect combination that makes installing large awnings **quick and easy**. This system also incorporates a **fabric protector** to extend the lifespan and maintain the aesthetics of the awning.

The High-Performance Win Pro System

Better protection with only two arms

The Win Pro 400 system simplifies the assembly and installation process, while making the awning system extremely **secure** and **stable**. In addition to advanced technology of the WIN system, it offers the maximum protected surface area using only **two arms**, reaching a projection of up to **4 metres** with width of up to **7 metres**.

The system can be installed either **faced** or **ceiling fixed**, allowing the most suitable supports for each situation.

Llaza Win Pro 400 System

Strong and Efficient Arms

The WIN Pro 400 arms incorporate a tensioning system that ensures **constant force** is applied and maintained throughout the extension and retraction of the awning.

The elbow system is completely hidden in the interior of the arms, making the outward appearance of the arm **clean and compact**.

The operation of the unit is smooth and precise and is based on an internationally **patented** system which creates less wear and tear, making opening and closing easier and increasing the **durability** of the system.

Comfort at Your Fingertips

The motorised or manual operation of the Win Pro 400 guarantees the increased **security and durability** of the system. Operation is simple and can be complemented with smart systems that adjust the awning automatically according to weather conditions.

Llaza Win Pro 400 System

Built-in Levelling System

To make sure that the system is perfectly level, the supports feature a **built-in level gauge** which is very handy during installation.

Adjustment with Precision and Control

The Win Pro 400 adjustment system works in two ways: it controls of the **angle of inclination** of the arms and it **fixes the position** of the arms to prevent unsightly sagging.

Versatility and Extra Fabric Protection

The Win Pro 400 system features a profile **fabric protector** to preserve the awning fabric, helping to keep it in prime condition for longer. This model can also be installed without the profile protector if the situation requires it.

Pivoting Closing System

The Win Pro 400 system also features a **pivoting closing system** to ensure ideal adjustment of the profiles. This means the fabric is **protected from the elements**, prolonging the life of the fabric, and assisting in maintaining a clean awning.

Colour Options

Win Pro 400 components come in optional colours of **White, Ebony** and **Silver**.

Approved Quality

The Win Pro 400 has been designed and manufactured in accordance with directives for length, strength, resistance and safety stipulated by European Standard EN 13561 for class 3.*

* Up to 3m projection and 3.5m if length does not exceed 5.5m. Dimensions exceeding these are in accordance with class 2.
