A Seamless Bond of
Strength and Security

SCREEN  SHIELD

The Strength of Nature

Screen Shield's multi-component retention design features stainless steel mesh, binding agent and wedge, locking it into place and ensuring maximum tension and firmness. Its one-of-a-kind design boasts serrated insulate to grip and stay in place even under undue force or stress, taking cues from a large predator- the crocodile. Think of our retention system like a crocodiles' jaw - it is renowned for its strength and powerful grip.

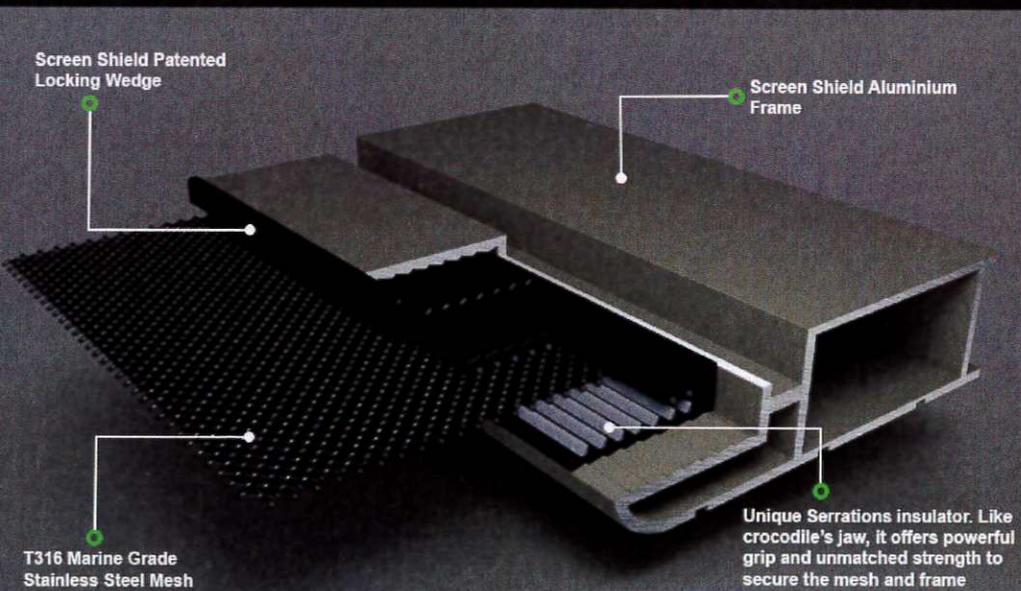

Convert crocodile biting concept to increase superior grip

Marine Grade Stainless Steel Mesh

Meshland Screen Shield stainless steel mesh is constructed from high - grade stainless steel mesh. The top-of-the-range mesh delivers superior strength, durability, and resistance to corrosion without compromising on the feeling of infinite space.

Powder Coated Aluminium Frame

Screen Shield's powder-coated aluminium frames deliver an attractive and heavy duty option, finished in the latest Colorbond range. The strength and security of our system is reinforced by a heavy duty 75mm - high frame.

Patented Security

Our patented and exclusive retention system features two components - an insulator and wedge. The insulator sits between the two different types of material that binds the mesh, then a unique wedging system locks into place for superb tension. Unlike screws or rivets, our powerful system ensures long-term durability and strength.
